<sup>1</sup>Additional forms may be required for the following permits:

- If your project may qualify for Department of the Army authorization through a Regional General Permit (RGP), contact the U.S. Army Corps of Engineers for application information (206) 764-3495.
- If your project might affect species listed under the Endangered Species Act, you will need to fill out a Specific Project Information Form (SPIF) or prepare a Biological Evaluation. Forms can be found at <http://www.nws.usace.army.mil/Missions/CivilWorks/Regulatory/PermitGuidebook/EndangeredSpecies.aspx>.
- Not all cities and counties accept the JARPA for their local Shoreline permits. If you need a Shoreline permit, contact the appropriate city or county government to make sure they accept the JARPA.

<sup>2</sup>To access an online JARPA form with [\[help\]](#) screens, go to [http://www.epermitting.wa.gov/site/alias\\_resourcecenter/jarpa\\_jarpa\\_form/9984/jarpa\\_form.aspx](http://www.epermitting.wa.gov/site/alias_resourcecenter/jarpa_jarpa_form/9984/jarpa_form.aspx).

For other help, contact the Governor's Office of Regulatory Assistance at 1-800-917-0043 or [help@ora.wa.gov](mailto:help@ora.wa.gov).

### Part 3—Authorized Agent or Contact

Person authorized to represent the applicant about the project. (Note: Authorized agent(s) must sign 11b of this application.) [\[help\]](#)

### Part 4—Property Owner(s)

Contact information for people or organizations owning the property(ies) where the project will occur. Consider both **upland and aquatic** ownership because the upland owners may not own the adjacent aquatic land. [\[help\]](#)

**Same as applicant.** (Skip to Part 5.)

Repair or maintenance activities on existing rights-of-way or easements. (Skip to Part 5.)

There are multiple upland property owners. Complete the section below and fill out [JARPA Attachment A](#) for each additional property owner.

Your project is on Department of Natural Resources (DNR)-managed aquatic lands. If you don't know, contact the DNR at (360) 902-1100 to determine aquatic land ownership. If yes, complete [JARPA Attachment E](#) to apply for the Aquatic Use Authorization.

## Part 5–Project Location(s)

Identifying information about the property or properties where the project will occur. [\[help\]](#)

- There are multiple project locations (e.g. linear projects). Complete the section below and use [JARPA Attachment B](#) for each additional project location.

**5a.** Indicate the type of ownership of the property. (Check all that apply.) [\[help\]](#)

**Potentially all of these, but unknown at this time.**

- Private  
 Federal  
 Publicly owned (state, county, city, special districts like schools, ports, etc.)  
 Tribal

5k. Is any part of the project area within a 100-year floodplain? [\[help\]](#)

Yes     No     Don't know

5l. Briefly describe the vegetation and habitat conditions on the property. [\[help\]](#)

**Vegetation will vary from native plant complexes to invasive weed species with a wide range of habitat conditions typically associated with near shore complexes.**

5m. Describe how the property is currently used. [\[help\]](#)

**The current use of the property will vary from WSDOT Rights of Way to private property, often times adjacent to an existing WSDOT structure such as a bridge or roadway. Property may include recreational beaches and shell fish beds.**

5n. Describe how the adjacent properties are currently used. [\[help\]](#)

**NA- Statewide**

5o. Describe the structures (above and below ground) on the property, including their purpose(s) and current condition. [\[help\]](#)

**There may be an existing bridge or other structure associated with utilities adjacent to the activity location.**

5p. Provide driving directions from the closest highway to the project location, and attach a map. [\[help\]](#)

**NA- Statewide**

## Part 6–Project Description

**6a.** Briefly summarize the overall project. You can provide more detail in 6b. [\[help\]](#)

**Take soil cores and other geotechnical survey information at marine water locations to determine sub-surface conditions and design parameters for proposed WSDAOT projects.**

**6b.** Describe the purpose of the project and why you want or need to perform it. [\[help\]](#)

**Marine sediment test drilling and other geotechnical surveys are necessary to determine the sub-surface composition for the purpose of structure and roadway design, hazardous materials detection, and other information necessary in the design roadway structures such a bridges.**

Other:

**6e.** Describe how you plan to construct each project element checked in 6d. Include specific construction methods and equipment to be used. [\[help\]](#)

- Identify where each element will occur in relation to the nearest waterbody.
- Indicate which activities are within the 100-year floodplain.

The sampling procedure is as follows:

A 4 inch casing is sealed into the lake or river bottom. The test boring is advanced through that casing with a 3 inch casing.

At every 5 foot interval a split spoon sampler is lowered on a 2 1/4 inch rod through the 3 inch casing to the bottom of the hole for taking soil samples. This process is repeated to the required depth of the soil investigation.

#### TRUCK MOUNTED DRILL

The truck mounted drill will access boring locations that are on relatively flat, easy to access sites. Each drill will have a support truck for water, tooling, and other required supplies.

#### TRACK MOUNTED DRILL

The track mounted drill is a low ground pressure (2.5 pounds per square inch rubber and steel track vehicle). It is used to access soft ground areas and sites with uneven or rough terrain. Each drill will have a support truck for water, tooling, and other required supplies.

#### PORTABLE BARGE

The Portable Barge is used when access is needed to an area within the waterbody where none of the above methods will work. It consists of hauling transportable pontoons to the vicinity by trailer and setting them into the water with a boom truck for assembly into a barge. Drills and support equipment are placed on the barge and moved into position for the drilling operation. The barge is held in place by four anchors.

For operations in deep water, a truck mounted drill is placed on a large barge rented. Tug boats are used to maneuver the barge.

#### CONE PENETROMETER TEST TRUCK

The Cone Penetrometer test truck is used to send sound waves into the ground to determine the density of material underground. It uses an electronic instrumented cone assembly, hollow core sounding rods, a 20 ton hydraulic thrust frame, and a computer data acquisition/processing system to perform the analysis. This is a self contained unit mounted on a truck. The system can be used from a barge for testing when there are deep soft sediment on the river or lake bottom.

6f. What are the anticipated start and end dates for project construction? (Month/Year) [\[help\]](#)

- If the project will be constructed in phases or stages, use [JARPA Attachment D](#) to list the start and end dates of each phase or stage.

Start date: 6/2/2014

End date: 5 years from start date

See JARPA Attachment D

6g. Fair market value of the project, including materials, labor, machine rentals, etc. [\[help\]](#)

6h. Will any portion of the project receive federal funding? [\[help\]](#)

- If yes, list each agency providing funds.

Yes  No  Don't know There may be Federal Highway Administration or other federal dollars associated with the activity.

## Part 7–Wetlands: Impacts and Mitigation

- Check here if there are wetlands or wetland buffers on or adjacent to the project area.

**7j.** For all excavating activities identified in 7h, describe the excavation method, type and amount of material in cubic yards you will remove, and where the material will be disposed. [\[help\]](#)

**NA – Activity only performed within marine waters.**

## Part 8–Waterbodies (other than wetlands): Impacts and Mitigation

In Part 8, "waterbodies" refers to non-wetland waterbodies. (See Part 7 for information related to wetlands.) [\[help\]](#)

**X Check here if there are waterbodies on or adjacent to the project area.** (If there are none, skip to Part 9.)

**8a.** Describe how the project is designed to avoid and minimize adverse impacts to the aquatic environment. [\[help\]](#)

Not applicable

Potential impacts may include minor disturbance to aquatic vegetation while accessing the site.

Sedimentation and erosion could be associated with soil disturbance along the bank caused by access to the site, setting up equipment, removing equipment from the site or other factors. All disturbed areas will be treated with the appropriate Best Management Practices (BMPs) for the control of sedimentation and erosion.

The bed of the water body will be disturbed by the placement of the drilling shaft. This will be negligible due to the small size of the shaft (4" in diameter). A small amount of turbidity may be associated with placing, extending, and removing the boring shaft. This would be considered negligible and no Best Management Practices (BMPs) are being recommended.

Aquatic life, including fish, in the immediate vicinity of the operation may be affected by the noise associated with setting up the drill rig, the boring operation, and removal of the equipment from the site or by the use of a cone penetrometer. Impacts, although minimal, to the spawning areas could be associated with the installation of the drilling shaft. To minimize potential impacts to fish, work will be performed during the in-water work windows set forth by the Washington Department of Fish and Wildlife.

Water quality could be impacted if there was a spill or leak of fluids used to operate the drilling rig. Proper Best Management Practices (BMPs) will be utilized to insure any spills or leaks are contained and not released into the water body.

In the event of a violation, DOT's Environmental Compliance Assurance Procedure (ECAP) will be followed.

8b. Will your project impact a waterbody or the area around a waterbody? [\[help\]](#)

Yes  No

8c. Have you prepared a mitigation plan to compensate for the project's adverse impacts to non-wetland waterbodies? [\[help\]](#)

- If Yes, submit the plan with the JARPA package and answer 8d.
- If No, or Not applicable, explain below why a mitigation plan should not be required.

Yes  No  Not applicable

Impacts are limited to the drilling hole which is minimal and does not require mitigation.

8d. Summarize what the mitigation plan is meant to accomplish. Describe how a watershed approach was used to design the plan.

- If you already completed 7g you do not need to restate your answer here. [\[help\]](#)

<sup>1</sup> If no official name for the waterbody exists, create a unique name (such as "Stream 1") The name should be consistent with other documents provided.

<sup>2</sup> Indicate whether the impact will occur in or adjacent to the waterbody. If adjacent, provide the distance between the impact and the waterbody and indicate whether the impact will occur within the 100-year flood plain.

<sup>3</sup> Indicate the days, months or years the waterbody will be measurably impacted by the work. Enter "permanent" if applicable.

**8f.** For all activities identified in 8e, describe the source and nature of the fill material, amount (in cubic yards) you will use, and how and where it will be placed into the waterbody. [\[help\]](#)

**Fill will consist of placing bentonite clay or other material to fill in and cap exploratory hole.**

**8g.** For all excavating or dredging activities identified in 8e, describe the method for excavating or dredging, type and amount of material you will remove, and where the material will be disposed. [\[help\]](#)

**Excavated (drilled) material will be disposed of offsite.**
